Slides Outline

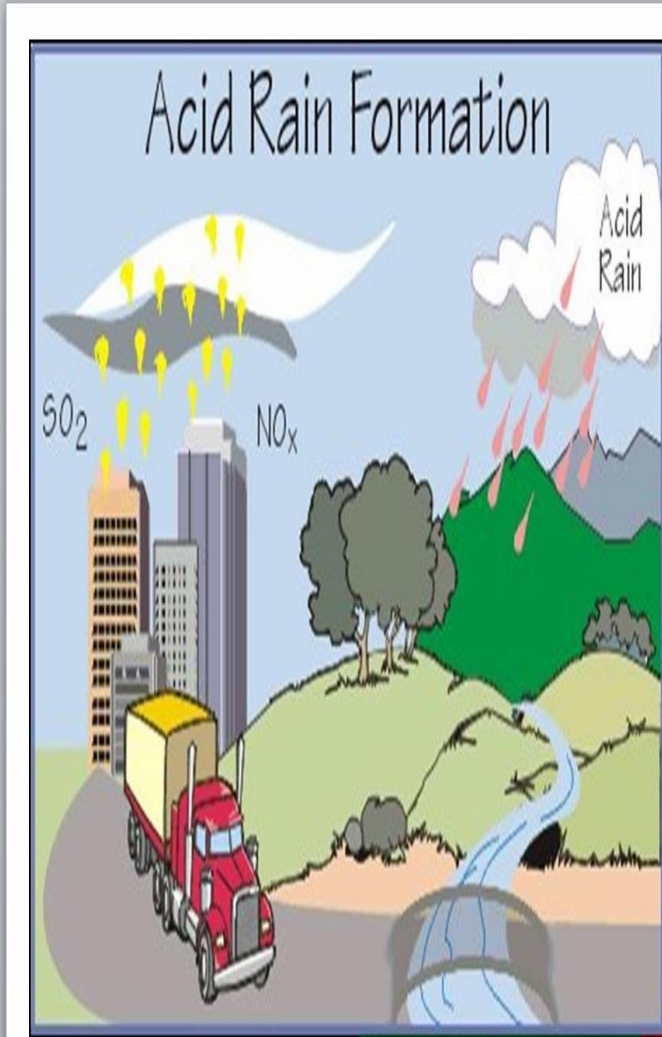

1 Acid Rain.
Acid rain is basically rain that has a higher than normal acid level (pH).

2 ACID RAIN
Sulfur dioxide (SO₂) and nitrogen oxides (NO_x) are released into the atmosphere from factories and cars. These gases mix with water vapor and oxygen in the atmosphere to produce acidic solutions of sulfate and nitrate acids - which fall as acid rain.

3 Acid Rain Formation

4 Causes of Acid Rain:
• Burning coal, oil and natural gas in power plants creates sulfur dioxide, one of the major causes of acid rain.
• Burning fossil fuel and diesel in which engine gas of nitrogen oxides (NO_x) is produced.
• These gases mix with water vapor and oxygen in the atmosphere to produce acidic solutions of sulfate and nitrate acids - which fall as acid rain.

5 The Problem!
People probably couldn't live without electricity! Therefore coal will continue to be burnt. Also, electricity and energy are constantly being generated.
Think of it this way: every time you turn on a light switch or the television set, without

HOWEVER

Some voters think that one vote do not make change in government or system.

Therefore, voting percentage is at an average 60 percent across India. Particularly, it is found less in urban areas.
